

PIVOT TO ICD-10

Plan. Implement. Validate. Operate. Track.

Clinical Documentation Training for ICD-10-CM has been developed for physicians, midlevel practitioners, nurses and other clinical staff providing documentation and/or coding. The courses are designed to simplify ICD-10-CM documentation requirements and are reviewed by clinicians to identify the critical documentation elements that will be required to maintain reimbursement once the ICD-10 transition is here. The most common medical conditions are addressed with a strong emphasis on associated documentation and coding requirements.

There are 32 different courses to choose from, depending on your expertise/specialty.

- Create your own custom training on demand — for busy practitioners and clinical staff, courses are offered in 15-20 minute increments
- Convenient eLearning format taught by clinical documentation experts and reviewed by a physician from a clinician's perspective
- Thorough documentation requirements for ICD-10-CM that impact your practice and workflow are reviewed
- Many different specialty areas to choose from to specifically meet your needs
- Learn at your own pace - stop, start, rewind, or pause the course at any time during the training

EXPERT INSTRUCTOR:

Dr. James S. Dunnick is a physician, board certified in internal medicine and cardiology. He has 25 years of clinical practice experience specializing in congestive heart failure, cholesterol, hypertension, and the effects of heart disease in women. He has authored published articles, medical textbook chapters and presented original research at national meetings.

Dr. Dunnick attended IU Bloomington and IU School of Medicine in Indianapolis, where he placed in the Honors Division. He is a Certified Professional Coder (CPC) through the American Academy of Professional Coders (AAPC) and also Board Certified in Health Care Quality and Management (CHCQM) by the American Board of Quality Assurance and Utilization Review Physicians (ABQAUWP). He now works full time helping physicians and hospitals with coding, compliance, and patient care algorithms that improve utilization and outcomes.

Clinical Documentation Training for ICD-10-CM
